

Kevin Wentzel

Chief Operating Officer | kevin.wentzel@kopisusa.com

KEVIN WENTZEL

Areas of Expertise

Kevin Wentzel is a Microsoft certified professional with a certification in business intelligence. In addition to business intelligence, a large portion of his career has focused on data-oriented projects that have transformed rapidly-growing companies' systems and processes, especially companies who find their growth quickly outpacing their legacy systems' capacity.

A graduate of Penn State including a prolific career as a standout D-1 NCAA Volleyball player and leading his team to an NCAA final, Kevin began his professional career ten years ago as a reporting developer for TetraData, a small, Greenville-based company specializing in the educational market. At TetraData, Kevin first worked in business intelligence, writing reports about student performance for school districts, taking into account various factors including demographics and individual student progress in relation to other students and previous years. In later stages of his time at TetraData, he built the data warehouses to load and store information from multiple reporting systems into their product and worked in research and development, building and repairing the systems themselves.

From TetraData, Kevin moved on to a tech startup, where he worked for a year focusing on extracting data from multiple places into one central data warehouse.

In 2011, Kevin began working for Kopis as a developer and quickly began impacting leadership and growth for the firm. In 2016 he was named Chief Operations Officer and is responsible for overseeing all development and project management operations, ensuring the company runs profitably, exceeds client expectations and delivers high-quality, high-value solutions while managing budget expectations, time frames, and quality control.
